The ability to write a cohesive, well thought out paper is necessary to succeed in any subject, whether the subject is in the physical sciences, math, or the liberal arts. Anyone who hopes to do well at school, at college, at work, or professionally, must master writing skills and techniques. Other guides for writing do not clearly present which steps to complete, and in what order these steps should be tackled. Often these guides are filled with confusing directions and terminology, contain much extraneous material, and do not present the essential points that are of interest to students. REA's books are easy-to-understand tools for writing any kind of paper. This book is intended to meet the practical needs of students and research workers who are preparing papers on scientific or technical subjects. The student who is confronted with the arduous task of writing up his data will find many suggestions that should not only lighten his workload, but enable him to present his material in a more effective way. Covered are the research problem, writing the paper, good form and usage, tables, illustrations, the prepublication review, and proofreading.
