"Winner - Best General Non-fiction Book" -- 2015 Great Southeast Book Festival

"Winner - Best Science Book" - *Foreword Reviews'* 2014 Indiefab Book of the Year Awards

"Winner - Best Education Book" -- 2015 Indie Excellence Book Awards for Small & Independent Presses

"Finalist - Best General Non-fiction Book" -- 2015 Los Angeles Book Festival

"Finalist - *Shelf Unbound* Contest for Best Independently Published Book of 2014

Can the discoveries of 21st-century molecular biology answer age-old questions about the human experience? Can studying proteins and DNA help us understand how we make our choices in sex and love? How we communicate? Why some people are able to become top athletes, while others have the intellectual gifts to become outstanding scientists or artists? Where our emotions come from? Or why we age and die?

Sex, Love and DNA describes how genetics and the environment affect our cells and thereby shape our lives. Every concept in the book, however elementary, is explained in a way that is understandable without any previous knowledge of biology or genetics. You'll discover biology through stories: stories of people who don't feel pain because of rare genetic variants, and children whose DNA enables them to perform unusual feats of strength. Individuals whose genes have given them healthy lives past the age of 100, and people who can't speak or read simply because they lack certain proteins. In short, you'll share the excitement the scientific community is experiencing as it addresses perhaps the greatest intellectual challenge of all - the challenge that Socrates described more than two thousand years ago as "to know thyself."
