In the practice of statistical modeling, it is often desirable to have an accurate predictive model. Modern data sets usually have a large number of predictors. Hence parsimony is especially an important issue. Best-subset selection is a conventional method of variable selection. Due to the large number of variables with relatively small sample size and severe collinearity among the variables, standard statistical methods for selecting relevant variables often face difficulties. Bayesian stochastic search variable selection has gained much empirical success in a variety of applications. This book, therefore, proposes a modified Bayesian stochastic variable selection approach for variable selection and two/multi-class classification based on a (multinomial) probit regression model. We demonstrate the performance of the approach via many real data. The results show that our approach selects smaller numbers of relevant variables and obtains competitive classification accuracy based on obtained results.

From reader reviews:

Marcus Laws:

The feeling that you get from Bayesian Variable Selection for High Dimensional Data Analysis: methods and Applications is a more deep you rooting the information that hide inside words the more you get enthusiastic about reading it. It does not mean that this book is hard to understand but Bayesian Variable Selection for High Dimensional Data Analysis: methods and Applications giving you joy feeling of reading. The article author conveys their point in particular way that can be understood through anyone who read this because the author of this book is well-known enough. This book also makes your own vocabulary increase well. Making it easy to understand then can go to you, both in printed or e-book style are available. We advise you for having this Bayesian Variable Selection for High Dimensional Data Analysis: methods and Applications instantly.

Joshua McIntosh:

Bayesian Variable Selection for High Dimensional Data Analysis: methods and Applications can be one of your basic books that are good idea. We recommend that straight away because this publication has good vocabulary that may increase your knowledge in words, easy to understand, bit entertaining but nonetheless delivering the information. The author giving his/her effort to place every word into satisfaction arrangement in writing Bayesian Variable Selection for High Dimensional Data Analysis: methods and Applications but doesn't forget the main position, giving the reader the hottest and also based confirm resource details that maybe you can be one of it. This great information can drawn you into brand-new stage of crucial thinking.

Maryann Warren:

You can get this Bayesian Variable Selection for High Dimensional Data Analysis: methods and Applications by look at the bookstore or Mall. Simply viewing or reviewing it could to be your solve issue if you get difficulties to your knowledge. Kinds of this guide are various. Not only through written or printed but also can you enjoy this book by simply e-book. In the modern era including now, you just looking because of your mobile phone and searching what their problem. Right now, choose your current ways to get more information about your publication. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose proper ways for you.

Michael Barth:

A lot of book has printed but it is different. You can get it by web on social media. You can choose the most effective book for you, science, comedian, novel, or whatever by searching from it. It is called of book Bayesian Variable Selection for High Dimensional Data Analysis: methods and Applications. Contain your knowledge by it. Without departing the printed book, it may add your knowledge and make you happier to read. It is most essential that, you must aware about book. It can bring you from one destination to other place.
